Profile

Computer Science graduate (Al Akhawayn University, 2026) focused on applied machine learning and LLM based applications. Builds deep learning systems end to end in Python and PyTorch, from data preparation to training, explainability and REST API delivery, and has shipped a conversational assistant on the GPT API. Rigorous on objective evaluation of AI systems: calibration, out of distribution testing, significance analysis. Comfortable with Git, Docker and containerised deployment.

Professional Experience

Software Engineer Intern **June 2025 to Aug. 2025**
Intelcia Solutions *Rabat, Morocco*

- Automated a data collection and processing workflow end to end in Python (acquisition, extraction, cleaning, transformation, reconciliation), cutting processing time from **2h30 to 15 min**, a **90 % reduction**, and returning over **10 hours** of manual handling per week to the business teams.
- Architected the pipeline as decoupled services running **10 concurrent workers**, with YAML configurable sources onboarding a new target at **zero code change**, plus integrity checks and structured logging that brought silent failures to **zero**.

Web Applications Intern **June 2024 to Aug. 2024**
ITS Elaraki School *Marrakech, Morocco*

- Built the "Preparia" exam preparation platform (WordPress, H5P), shipping **30+ interactive modules** across **6 baccalaureate subjects**.
- Ran documentation, functional support and end user training, onboarding **150+ students and 12 teachers** without follow up IT support.

Education

Al Akhawayn University in Ifrane, BSc in Computer Science (Minor: Communication Studies) **Sep. 2021 to July 2026**
Ifrane, Morocco

Boğaziçi University, Exchange program in Computer Engineering, *Istanbul, Turkey* **Fall 2024**

Technical Projects

AneuXplain: explainable AI for medical imaging | Python, PyTorch, FastAPI, React 2026

- PointNet based classifier trained on **2,000+ 3D meshes**, reaching **0.83 AUC** and **85 % accuracy** on a patient level split, with a gradient saliency explainability layer; inference and explanations served through a **FastAPI REST API**.

PitchPoint: evaluation driven deep learning | Python, PyTorch, LightGBM, scikit-learn 2026

- Attention based set encoder trained on **99,000+ events**, benchmarked against gradient boosting and linear baselines through an evaluation harness built before any model: calibration (**ECE 0.0464 to 0.0038**), out of distribution holdouts, bootstrap significance testing, **444 tests passing**.

eSaha: LLM powered multilingual assistant | Python, Flask, GPT API, MongoDB, React 2025

- Conversational assistant integrated through the **GPT-3.5 API**: prompt engineering for a consistent persona across **4 languages**, sentiment analysis, JWT secured REST API, relational and document data modelling.

Technical Skills

Languages: Python, SQL, JavaScript, TypeScript, Java, C/C++, YAML
Machine Learning: PyTorch, scikit-learn, LightGBM, Pandas, NumPy, deep learning, training and evaluation, calibration, embeddings
Generative AI: LLM API integration, prompt engineering, conversational assistants, sentiment analysis, model quality, cost and safety evaluation
Backend & Data: FastAPI, Flask, REST APIs, PostgreSQL, MySQL, MongoDB, SQLAlchemy, data preparation, ETL
MLOps & Tools: Git, Docker, Kubernetes, Linux, Nginx, CI/CD (Tekton), AWS, monitoring, Agile/Scrum, code review

Languages & Activities

Arabic: native **French:** bilingual **English:** professional **Spanish:** basic
Mentoring: mentor with the AUI Compete Organisation (algorithmic problem solving).
