Profile

Computer Science graduate (Al Akhawayn University, 2026) oriented towards data and machine learning engineering. Built and shipped an industrial data pipeline in production (acquisition, cleaning, transformation, reconciliation, quality control) for a 95 % reduction in processing time, and two modelling projects taken from raw data through to evaluated, explainable models. Rigorous on data quality, traceability and objective model evaluation: calibration, out of distribution testing and significance analysis.

Professional Experience

Software Engineer Intern **June 2025 to Aug. 2025**
Intelcia Solutions *Rabat, Morocco*

- Designed and shipped an end to end Python data pipeline (acquisition, extraction, cleaning, transformation, reconciliation against source systems), cutting processing time from **2h30 to 15 min**, a **95 % reduction**, and returning over **10 hours** of manual handling per week to the business teams.
- Built the pipeline as decoupled, orchestrated stages running **10 concurrent workers**, with YAML configurable sources onboarding a new data source at **zero code change**, plus integrity checks and structured logging that brought silent failures to **zero**.

Web Applications Intern **June 2024 to Aug. 2024**
ITS Elaraki School *Marrakech, Morocco*

- Built the "Preparia" exam preparation platform (WordPress, H5P), shipping **30+ interactive modules** across **6 baccalaureate subjects**.
- Ran documentation, functional support and end user training, onboarding **150+ students and 12 teachers** without follow up IT support.

Education

Al Akhawayn University in Ifrane, BSc in Computer Science (Minor: Communication Studies) **Sep. 2021 to July 2026**
Ifrane, Morocco

Boğaziçi University, Exchange program in Computer Engineering, *Istanbul, Turkey* **Fall 2024**

Technical Projects

AneuXplain: explainable AI for medical imaging | Python, PyTorch, FastAPI, React 2026

- End to end pipeline on **2,000+ 3D meshes**: preprocessing, feature extraction and a PointNet based classifier reaching **0.83 AUC** and **85 % accuracy** on a patient level split, with gradient saliency explanations and 8 automated morphological biomarkers.

PitchPoint: evaluation driven modelling on 99,000+ events | Python, PyTorch, LightGBM, scikit-learn, Pandas 2026

- Attention based set encoder benchmarked against gradient boosting and linear baselines through an evaluation harness built before any model: grouped cross validation, calibration (**ECE 0.0464 to 0.0038**), out of distribution holdouts and clustered bootstrap significance testing; **444 tests passing** and limitations documented in a model card.

Mini Private Cloud: containerised platform | Python, Docker, Nginx, PostgreSQL 2026

- Python orchestration CLI driving the Docker Engine: declarative YAML provisioning, horizontal scaling, load balancing, metrics and logging, and self healing services.

Technical Skills

Languages: Python, SQL, Java, JavaScript, TypeScript, YAML
Data Engineering: ETL and workflow automation, pipeline orchestration, web scraping (Selenium), data quality and integrity checks, Pandas, NumPy, PyArrow
Databases: PostgreSQL, MySQL, MongoDB, SQLAlchemy, schema modelling, query optimisation
Machine Learning: PyTorch, scikit-learn, LightGBM, model evaluation, calibration, cross validation, significance testing, explainability
Tools & Platforms: Git, Docker, Kubernetes, Linux, CI/CD (Tekton), AWS, FastAPI, REST APIs, monitoring, Agile/Scrum

Languages & Activities

Arabic: native **French:** bilingual **English:** professional **Spanish:** basic
Mentoring: mentor with the AUI Compete Organisation (algorithmic problem solving).
